

CARTON PACK SpA, in pursuing the continuous growth of its business, has always taken into account environmental protection and the environmental impacts of its operations. In addition to complying with current regulations and certifying its management system according to ISO 14001, the company has voluntarily decided to implement a management system to ensure the sustainability, traceability, and identity of the raw materials used throughout the entire supply chain, during the production process, up to the finished product.

The final objective is to obtain the ISCC PLUS certification, which is part of the International Sustainability & Carbon Certification (ISCC) scheme, enabling CARTON PACK SpA to manufacture sustainable products.

Through this voluntary choice, CARTON PACK SpA aims to demonstrate the sustainability of its products and supply chains, starting from the origin of the biomass used to produce them.

In line with the ISCC Plus standard, CARTON PACK SpA therefore commits to achieving the following objectives:

1. Promote the use of ISCC PLUS certified raw materials in order to increase the sustainability of our products;
2. Verify and qualify suppliers in compliance with the requirements of the ISCC PLUS standard and strengthen collaboration and integration by optimizing communication with them;
3. Maintain an internal collective commitment to compliance with ISCC principles and criteria through continuous training of its employees;
4. Document, communicate, and promote its commitment to environmental protection, occupational health and safety, social responsibility, and sustainability;
5. Publicize this ISCC PLUS policy through its communication channels to all stakeholders and review it annually;
6. Verify the correct accounting of ISCC PLUS Credits, avoiding "double counting."

All our products and the processes used to manufacture them comply with our internal specifications and applicable regulatory requirements, with particular reference to those required by the ISCC system.

Procedural standards, together with our information system, ensure full traceability and trackability of our products starting from the batches of ISCC PLUS certified raw materials used.

The company periodically carries out traceability tests and internal audits in order to monitor over time the correct application and adequacy of the implemented system.

Note: This policy, which represents Management's commitment to complying with the requirements of the ISCC+ standard, should be considered temporary. It will shortly be incorporated into the company's overall policy in line with all currently applied standards.

The Management
